

Professor Helena Janik

Prof. Helena Janik is working for Polymer Technology Department at Chemical Faculty of Gdansk University of Technology (GUT). She graduated at Gdansk University of Technology in 1973, where she received PhD in 1989 and she was awarded with professor title in 2012. At present she is the head of the group leading the projects involved with the studies on polymers friendly for our environment or our health. At present the polymer materials, polymer blends or polymer composites of her interest are as follow: biodegradable polymers, especially polysaccharide based, polyurethanes for technical and medical application, asphalt modification with polymers and others.

She is lecturing the following courses for Polish and Erasmus students coming to GUT: Polymer Chemistry, Polymers for Environmental Protection, Polymer Properties, Polymer modification, Microscopy in Environmental Monitoring and others. She is the owner of many patents and author of many papers indexed by WOS. She is PhD thesis supervisor for many years.
